97E, Scape Adelaide
Central , North Terrace ,
Adelaide SA 5000

EDUCATION

Bachelor of Engineering (Computer Science) (2020-2024)

Anna University (Kumaraguru
College of Technology)
GPA: 8.08/10; CGPA: 8.08/10

Masters in Artificial Intelligence and Machine Learning (2024-2026) University of Adelaide (Go8) GPA: 5.7/7

TECHNICAL SKILL

- MongoDB Express.js
React.jsNodejs (MERN)
- Convolutional NeuralNetworks
(CNN)
- Machine Learning and Data
Science
- TensorFlow
- Keras
- Solidity
- React.js
- loveable
- supabase
- RLS policies development

LANGUAGES

- ENGLISH
- TAMIL
- HINDI

CHRISTEN I. LOYOLA

PROJECTS

WEB APPLICATION FOR REGEX PATTERN MATCHING AND REPLACEMENT (AUG 2025 - SEP 2025)

A full-stack web app built with Django, React, and OpenAI's LLM to automate text pattern recognition and data cleaning. Users upload CSV or Excel files, describe patterns in plain language, and receive generated regex via REST API. The app highlights matches, applies replacements to specified columns, and allows users to preview and download the transformed data. Supports regex explanation, error handling, and seamless integration with backend services

.PATTERN MINING AND RECOMMENDER SYSTEM (APRIL 2025 - MAY 2025)

Development of the personalized recommendation system for a grocery retail setting using collaborative filtering and frequent pattern mining techniques. The approach involved creating an item based collaborative filtering system that generates the top 5 product recommendations for customers based on their previous purchasing behaviour

AUTOMATED TEXT CLASSIFICATION SYSTEM (APRIL 2025 - MAY 2025)

Developed a rule-based system to categorize over 22,000 typical NLP-related problems raised by developers on Stack Overflow using the Stack Exchange API. The System sets up a categorized knowledge base highlighting developer issues and solutions in NLP (Natural Language Processing).

UNDERWATER MARINE ANIMAL IDENTIFICATION SYSTEM (OCT 2023 – OCT 2024)

Team Lead to develop a system to identify the type and name of a marine creature by referencing the features extracted from a large dataset of seven thousand images using VGG16 model and identifying them using a custom Convolutional Neural Networks (CNN).

CONSERVISION (OCT 2022 - DEC 2022)

Developed application using Convolutional Neural Networks (CNN). This system automates counting and classification of images of animal spictured from wildlife sanctuaries.

EXPERIENCE

SOFTWARE ENGINEER , Ahfy (SEP 2025-present)

Implemented SQL-based role detection and access control using Supabase authentication, ensuring users with higher access clearance can access critical/sensitive information.

Design and enforced Row Level Security (RLS) policies in Supabase to support multi-role users, including conditional data visibility based on login context.

Integrated Loveable and Supabase, managing database schemas, authentication flows, and environment variables to support transitions from development to production.

Create and maintain a shared development database in Supabase for the team, standardizing table structures, column naming conventions, and security policies.

Utilize Supabase AI tooling to generate SQL queries for table creation and RLS policy configuration, accelerating secure database setup and reducing manual errors.

Contribute to frontend updates and minor feature enhancements using FlutterFlow, assisting with UI fixes and small-scale workflow improvements.

developing a statistics dashboard using react.JS and type script via the loveable platform

POWER LINKS CONSORTIUM

Internship Trainee Developer (Jun 2023 – Jul 2023)

- Developed 3D models using iTwin Platform.
- Formulated Configuration Log reader to read log files.
- Trouble shooting techniques of the configuration log.

CAMPALIN INNOVATIONS

Online internship (Jan 2023 – Feb 2023)

- Developed a Wine Quality Ranking system

SELF ENHANCEMENT

Marketing Lead

Bharat Blockchain Yatra, Nov 2023
